OC&C Strategy & Analytics GmbH

As an international strategy consultancy with 15 offices worldwide, we support companies on key strategic questions. Our approach: we keep thinking through problems until we truly reach the root cause. To do this, we are looking for curious minds who are eager to dive deep into complex topics and take on responsibility.

Associate Consultant Strategy & Analytics

City: Düsseldorf, München; Starting date (earliest): At the earliest possible;
Remuneration: Market-leading

Tasks

The analytics practice is a key source of the strategic advice we provide to senior client management. As our clients' data is becoming increasingly big and complicated, the need for high quality statistical analysis is growing rapidly. OC&C is regularly tasked with problems where the answers are hidden in large, messy and complex data sets such as transaction data, customer-behaviour data and web data. The analytics practice works in teams alongside our strategy colleagues to unearth insights, identify recommendations and communicate them persuasively to our clients. Analytics is therefore an increasingly important part of what OC&C does and growing rapidly as a practice.

As part of the analytics team, you can expect to work both with other technical experts as well as with the strategy team. You will need to be interested in solving strategic problems for our clients, which means pragmatic solutions on strategy consulting timescales. Project lengths are 2-12 weeks, so you will encounter a great variety of problems in different sectors. You will be in a supportive environment, where everyone is pulling together to deliver a great answer in the most efficient way possible. You will rapidly develop your commercial skills and become an expert in deploying advanced analytics in a pragmatic way that is sensitive to the data challenges faced by most businesses today.

Requirements

- Undergraduate or postgraduate Degree in Economics, Analytics, Computer Science, Mathematics, Statistics or another quantitative field (Undergraduate degree First or Upper Second)

- Experience working with data sets in an academic environment

- Demonstrated aptitude for statistics, with a clear interest to learn more

- Exposure to one or more programming languages (any language acceptable). Experience with R and/or Python and/or SAS/WPS is desirable but not essential

- An outgoing people person, who enjoys discussing their ideas and their work with others

- Rapidly produces clear and concise written work

- Collegial and collaborative; carries out fair share of work; consistently adds creative, insightful ideas; meets all deadlines; demonstrates ability to lead and motivate others

- Native-speaker level German and excellent English

What we offer

Strategy & M&A Focus
You will work on exciting projects in our core sectors: Retail, Leisure & Hospitality, Consumer Goods, Technology & Media, B2B Products & Services, and Private Equity.

Team & Culture
We place great value on an open, supportive working environment. Different perspectives make us stronger – which is why we actively promote diversity. In addition, we support your interests outside of work with a "Hobbies & Wellness" allowance and regular team events.

Purpose & Responsibility
Alongside commercial projects, we are also engaged in pro bono initiatives and ESG topics. OC&C is proud to be B Corp certified.

International Perspectives
You will regularly work in cross-office teams and have the opportunity to work abroad for several months or to relocate to another office in the long term.
