

Levered GmbH

We are an early-stage venture backed by top-tier VCs. Our mission is to help product teams leverage AI to create better performing user experiences.

Founding Engineer

We're looking for a Founding Engineer to join us in inventing the future of AI-powered product optimization. We're offering a top of market salary + meaningful equity to find someone exceptional to join our team in Berlin

City: Berlin; Starting date (earliest): At the earliest possible; Duration: Not limited;
Remuneration: We're offering a top of market salary + meaningful equity to find someone exceptional; Reference number: Stellenticket

Working field

Why this role is special:

You'll be the first engineer and the fourth member of the founding team. This is a rare opportunity to shape not just the product, but the company itself.

- Solve fundamentally new problems using AI: we're looking for engineers who are as excited as we are about venturing into the unknown, and pushing the boundaries of what can be achieved with bleeding-edge AI technologies.
- Solve a problem every product team has. Not having enough traffic or resources to test all their ideas and find the best possible version of their product.
- Join a world-class team. The founders Spencer and Marcel have built and shipped products serving millions of users. We understand and value quality engineering.
- Have massive impact. This is a zero-to-one role, with high autonomy and ownership over how the product is built.

In this role, you will:

- Built the product from the ground up. Joining at an early stage, you will play a crucial role in shaping the implementation and engineering methodologies and culture. You won't spend time fighting with a legacy code-base.
- Prototype, test, and iterate fast. We believe the fastest way to test assumptions is to build a prototype and put it in front of the user.
- Explore the capabilities of AI tooling. The capabilities of AI are moving fast, and we have to move fast with it. Together we will stay on top of the latest

developments, and experiment with new technologies regularly.

Requirements

Your background looks something like this:

- 0-to-1 product building experience - you have a history of building products from the ground up, all the way to release.
- Generalist > Specialization - even if you have an area or two of particular expertise, you don't shy away from taking on new challenges and working on every area of the code-base.
- Software Craftsmanship - you take pride in building high-quality, robust and performant software.
- Product Mindset - you have experience building products with great user experience.
- Pragmatism > Process - you're more focused on delivering value than perfecting naming conventions.

As a person, you

- Are first and foremost a builder
- Are ambitious, self-motivated, and goal-oriented
- You either have experience working in a startup or are really drawn to the zero-to-one phase
- Value working with people who are kind, ambitious, and pragmatic

Our Stack:

At levered we optimize our engineering process to allow us to move quickly, and we choose tools which enable us to produce robust, performant software while minimizing overhead. We use:

- Infra: Serverless / GCP
- Back-end: Rust & Python
- Front-end: React/typescript

We're much more concerned with finding great engineers who can learn fast and match well with our mindset and way of working than a perfect tech fit.

What we offer

This is a founding team role, with all the agency and upside that comes with. We're assembling the best crew to reimagine a category, and we're serious about backing that with meaningful ownership. Our compensation philosophy is to offer a competitive salary and grant above market equity for our stage (pre-seed).

We work mostly in person from our Berlin office, with flexibility for remote days when needed. We believe the best ideas (and the most fun) happen when we're building together in the same room, especially in the early days.

Lastly, amazing people come from all kinds of backgrounds. If this sounds exciting to you, even if you're not sure you tick every box, we'd love to hear from you.

Application

Email Co-founder Marcel: hi@getlevered.ai.

1-2 lines say hello and start the conversation is fine. We are currently not working with external recruiters or recruitment agencies.
