

Artificial Mobility Intelligence GmbH - RWTH Aachen spin-off startup

Artificial Mobility Intelligence is a deep-tech spin-off from RWTH Aachen building predictive AI for mobility ecosystems. Our smartphone-based SDK and app are already live across 3 continents, serving over 15,000 users — and counting.

QA Engineer Working Student or Intern (Pflichtpraktikum/Voluntary)

Break Stuff That Matters.

City: Aachen; Starting date (earliest): At the earliest possible; Remuneration: Flexible;
Reference number: 003; Closing date: 30/09/25

Working field

Test our predictive-AI-powered mobility app, on the road!

Requirements

Location: Aachen, Germany

□ Working Hours:

- Part-time (10-20 hrs/week) for working students
- Full-time for internships

Start Date: Flexible to your schedule but we'd like to have you onboard at your earliest availability

Duration: min. 3 months

Break Stuff That Matters.

At Artificial, we don't ship features — we ship **mission-critical AI** to the streets of Tokyo, Toronto, and Toulouse.

We're looking for someone obsessed with quality, detail, and mobile apps — someone who enjoys poking, testing, and pushing apps to the edge **before** users do.

This isn't a fake internship where you "learn and observe" — you'll be **owning** real QA cycles, testing in real vehicles, and working directly with our product and founding teams. If you're curious about how AI meets mobility — this is your gateway.

What we do

Artificial Mobility Intelligence is a deep-tech spin-off from RWTH Aachen building predictive AI for mobility ecosystems.

Our smartphone-based SDK and app are already live across 3 continents, serving over 15,000 users — and counting.

Your Role:

- Run **manual tests** on our iOS/Android apps across real-world driving scenarios
- Report bugs and odd behavior like a seasoned detective
- Help craft test cases and polish up regression test plans
- Give feedback from a user's perspective — not just a checklist
- Be part of the release loop — your voice impacts what ships
- Yes, we'll give you the car.

Your Profile:

☐ Must-Haves:

- Enrolled in university (CS, Media Informatics, or related)
- Class B driver's license (and not afraid to use it)
- Detail-obsessed and structured thinker
- Familiar with iOS and Android mobile environments
- Fluent in English (bonus points for German)

Nice to Have:

- Prior QA or testing experience (manual or automated)
- Basic knowledge of tools like Jira, TestRail, or similar
- Passion for mobile tech and apps

What we offer

♥What you get:

- Flexible hours (10–20 hrs/week) or full-time internship
- Direct mentorship from the founding team (CEO/CTO)
- Full visibility into product development in an AI startup
- An international team that values clarity, ownership, and good humor
- A fast-moving environment where your work actually matters
- Real users, real impact, real startup energy — no corporate fluff

Application

Apply As:

- A **working student** (part-time during the semester)
- A **mandatory intern** (Pflichtpraktikum)
- A **voluntary intern** (up to 3 months full-time)

We're flexible — as long as you bring curiosity, care about quality, and aren't afraid to break stuff (for the greater good).

At Artificient, we celebrate and support differences.

We welcome people of different ages, ethnicity, religion, citizenship, gender identity, sexual orientation, and disability to our family. We believe difference sparks innovation.

Sounds intriguing? **Please send your application with an updated resume, your preferred contract type and your availability to [contact@artificient.de]**
